

# MAD501 series

**AIR UNITS (Auto-drainer)**

- Clean compressed air, extends the life of pneumatic equipment
- No electricity required
- Easy installation not limited by space

## Specification:

Model	MAD501	MAD501H
Dimensions	6" × 4" × 8" (150mm × 100mm × 200mm)	
Inlet	PT 1/2	
Manual outlet	PT 1/2	
Automatic outlet	PT 3/8, 5/16"HOSE	
Operating pressure range	20-125 psig(1.3-8.8 kg/cm <sup>2</sup> )	40-180 psig(3-12.7 kg/cm <sup>2</sup> )
Ambient temperature	36~140 °F (2~60 °C)	
Min. equipment requirement	180 l/min (about 1 HP)	250 l/min (about 2 HP)
Max. condensate discharge rate	15 gal/hour (57 l/min)	12 gal/hour (46 l/min)
Bowl	Polycarbonate (PC)	Aluminium
Weight	2.9 lbs. ( 1.3kg )	3.1 lbs. ( 1.4kg )

※ Port thread BSP. NPT. are also available.

**Order example:**

**MAD501 – H**

MODEL

Fiter Bowl Material

Blank: Poly carbonate (PC)

H: Alumium Alloy

## Accessories

Bushing	1/2" × 1/4" PT
Bushing	3/8" × 1/4"PT
Hose fitting	1/4" PT
Hose	8 mm (O.D.) × 5 mm (I.D.) × 5 ft. (1.5 meters)

## Continuous elimination of water

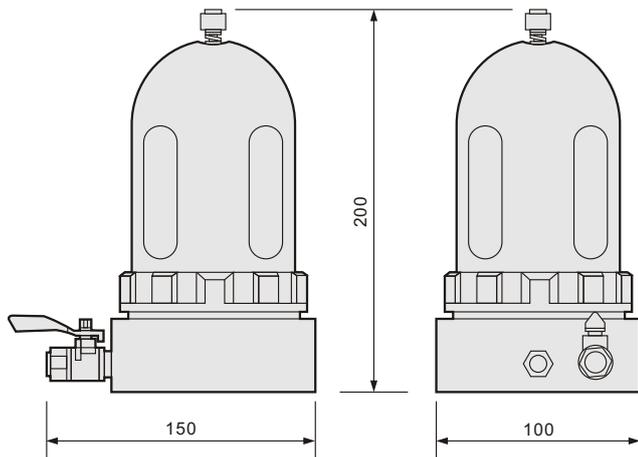

MAD501(H) automatic drain valve features an advanced design. Through the hose connections, Condensate, oil and sludge are eliminated from the compressed air equipment. The continuous-duty drainer constantly collects contaminants until these are eliminated "on demand" thus keeping a compressed air system clean. When installing the drainer, one is not limited by height nor position; uniquely, it can be installed in any ideal place or position. Since it needs only air pressure to operate, no electrical or outside controlling mechanisms are required. It rapidly and accurately eliminates water and other contaminants.

## Solid, liquid and gas separation

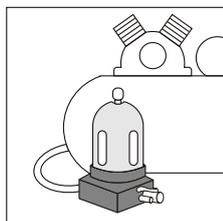

The specially designed structure of the MAD501(H) separates solid, liquid and air. Since the controlling mechanisms are located in the air section, the moving parts are not affected by water, oil, or sludge-producing years of trouble-free draining.

An integral part of the MAD501(H)'s design is the large cylindrical filter and manual valve (located in the base). Here, solids such as rust and pipe scale collect. In order to eliminate this waste, one need not stop the unit or use any tools; conversely, by briefly opening the manual valve, waste is immediately purged from the unit.

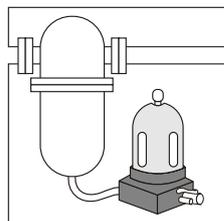

Finally, the liquid water and oil collect in the lower chamber (away from the controlling mechanisms) until purged either automatically or by opening the manual valve.

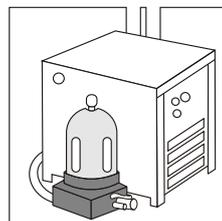

## Applications:

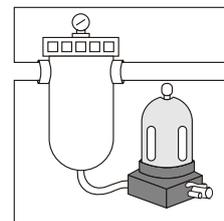

Air compressor

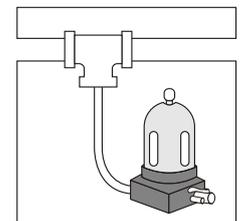

Separator

Air dryer

Air filter

Drop leg
